## Simple

The Aural Configuration Software is a graphical user interface tool that is easy to use and understand. Within the software, the Aural Assistant walks the user through the software for effortless setup of for the Aural system. The procedures are straightforward and clearly defined.

## Effective

The software lets the user configure a large variety of features. The user can set a class of service for individual or groups of telephones with the feature set they want.

Numbering plans, country dependant timing settings, Automatic Station Relocation are just a few more of the system parameters that are accessible with the software. In addition, port configuration and grouping are also easily set through the graphical user interface.

## Powerful

The user can restore the system to the factory default settings at the touch of a button or update the system with preset configuration files. Users can also create and erase voicemail and auto attendant messages on a PC and load them through the configuration software.
