

Aural Networks

Remote Management

Aural Networks' Remote Management provides our dealers a simple tool to manage and support their Aural 30 Communication System customers.

- Stay organized with up to date customer information database
- Shadow clients' system information for remote configuration and diagnostics
- Remotely update clients' system software

The Aural Networks Remote configuration software provides continuous improvements for your Aural system with automatic firmware updates.

The simple Graphical User Interface allows customers to effortlessly manage clients.

Save

Time
