Lingual Auto Attendant

## *Integrated Voicemail and Auto Attendant*

Aural Networks' Integrated Voicemail and Auto Attendant features help improve customer service and business communication to increase productivity.

## *Feature Rich*

The Aural 30 includes a two-hour voicemail system with an option to upgrade to four and a half hours. Users can personalize and download every message through a PC, or users manually record auto attendant messages, voicemail greetings, and system prompts through the telephone. Features such as message forwarding with message priority and appending as well as rewind and fast-forward during message play back increase efficiency in using the phone system.

## *Simple*

Users can access voicemail with a feature key from their Key Telephone Set. Off premises voicemail access is protected by a password and is simple to use.

## *Extended Voicemail and Auto Attendant*

The Extended Voicemail and Auto Attendant system combine virtually unlimited storage with multi lingual Auto Attendant messages interfaced to an easy to use graphical user interface.
